Bee2Bee

Autonomous B2B Restocking & Settlement Copilot

From messy supplier chats to automated procurement workflows.

UMHackathon 2026
UNIVERSITI MALAYA
PEKON

Procurement relies on fragmented, unstructured chaos

Inventory

Manual inventory tracking delays critical restocking.

Communication

Supplier negotiations fragmented across WhatsApp and email.

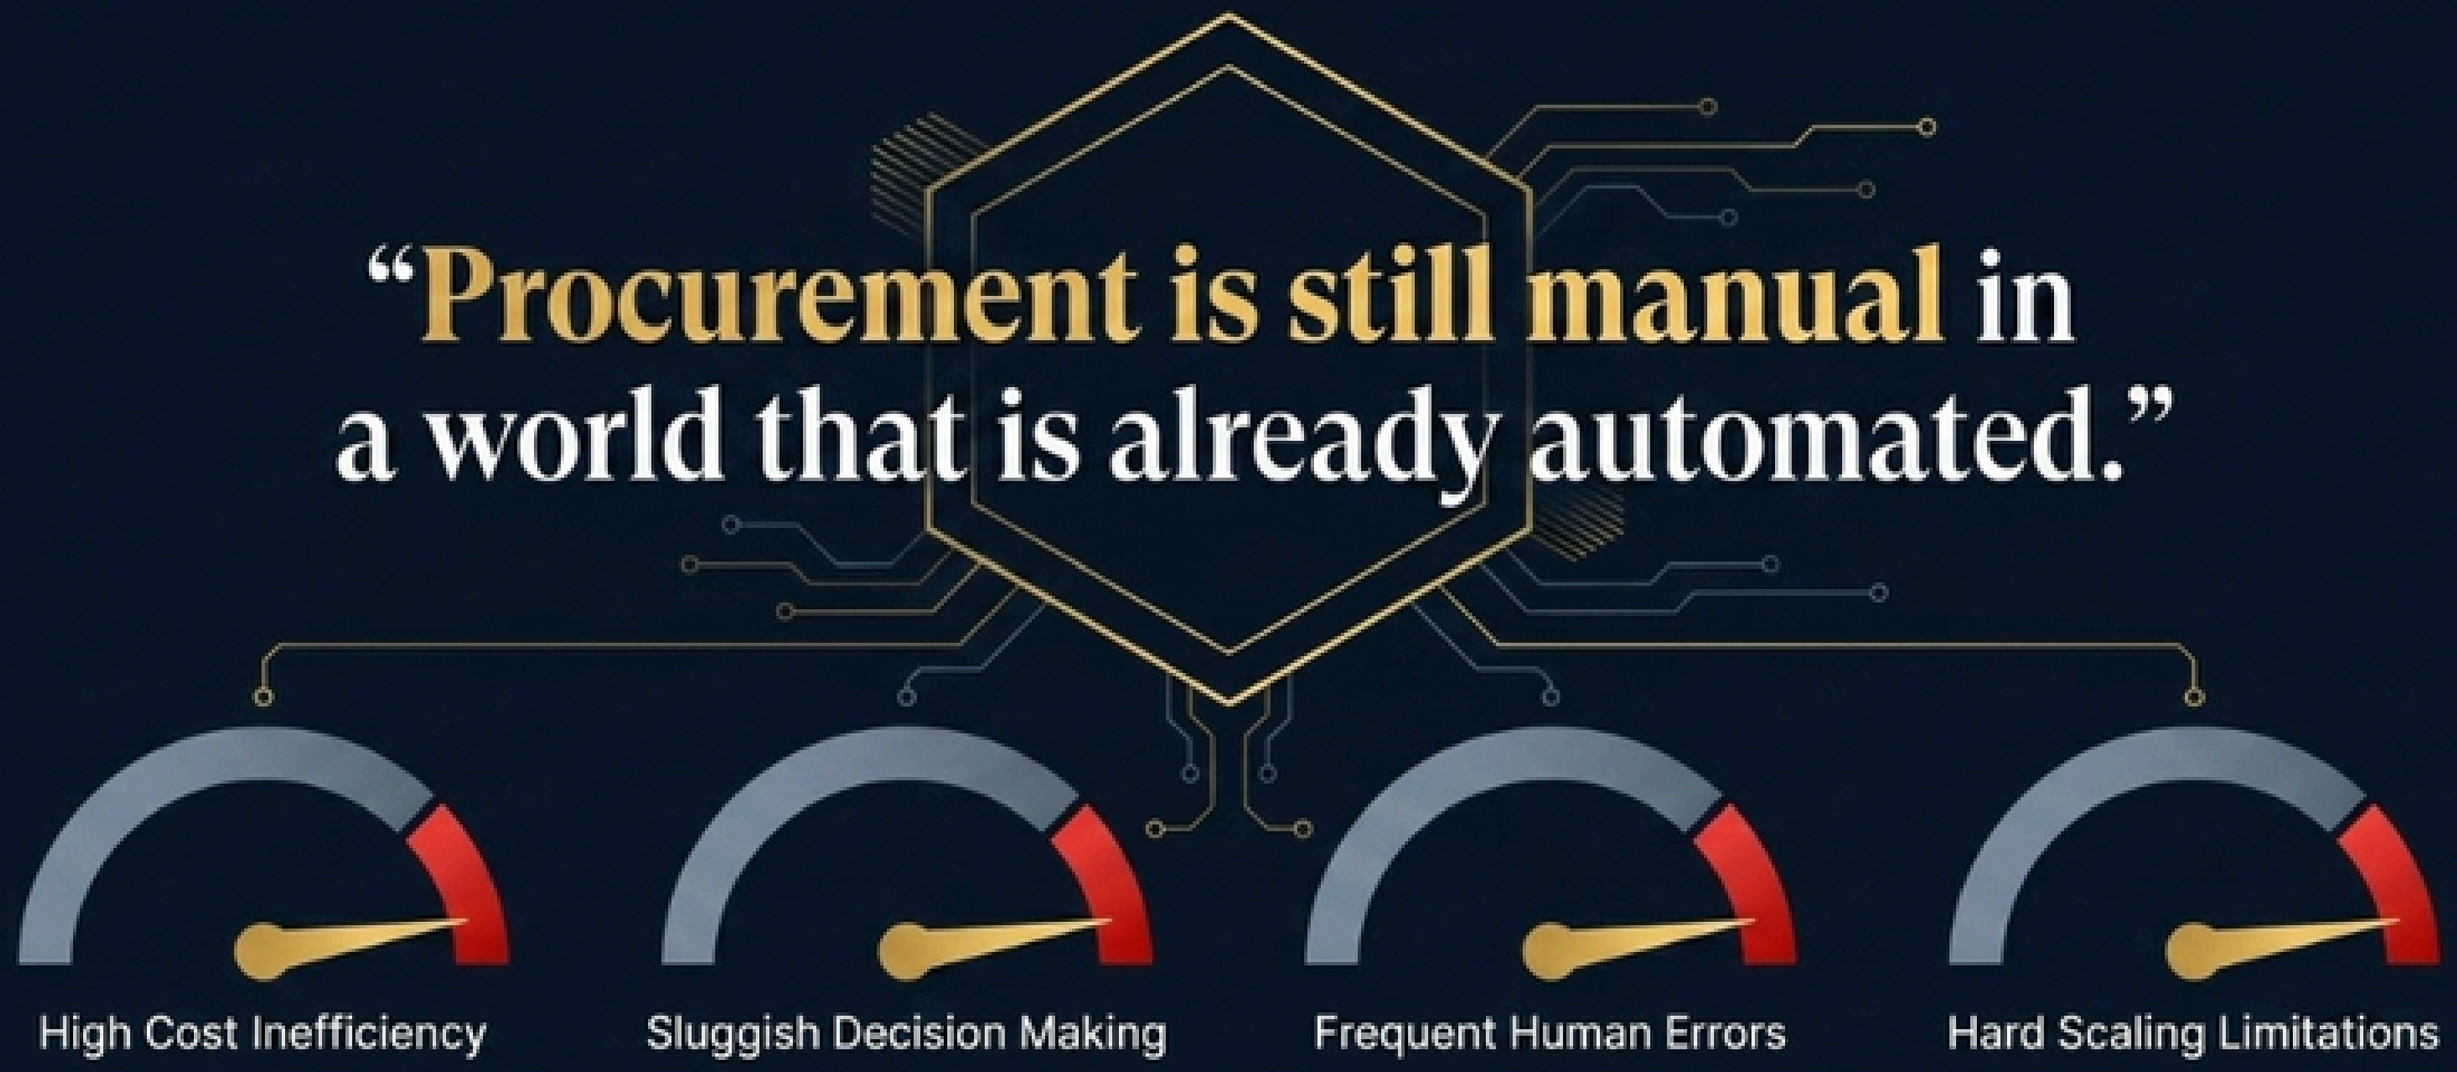
Data

Critical terms buried in unstructured PDFs, images, and voice notes.

Finance

Manual invoice verification increases fraud risk and payment errors.

The business cost of manual oversight



An AI-powered copilot that structures the unstructured

Automates the end-to-end workflow to shift users from manual executors to strategic overseers.

The autonomous restocking lifecycle

Detect Low Stock
System monitors thresholds

Predict Demand
AI analyzes historical sales context

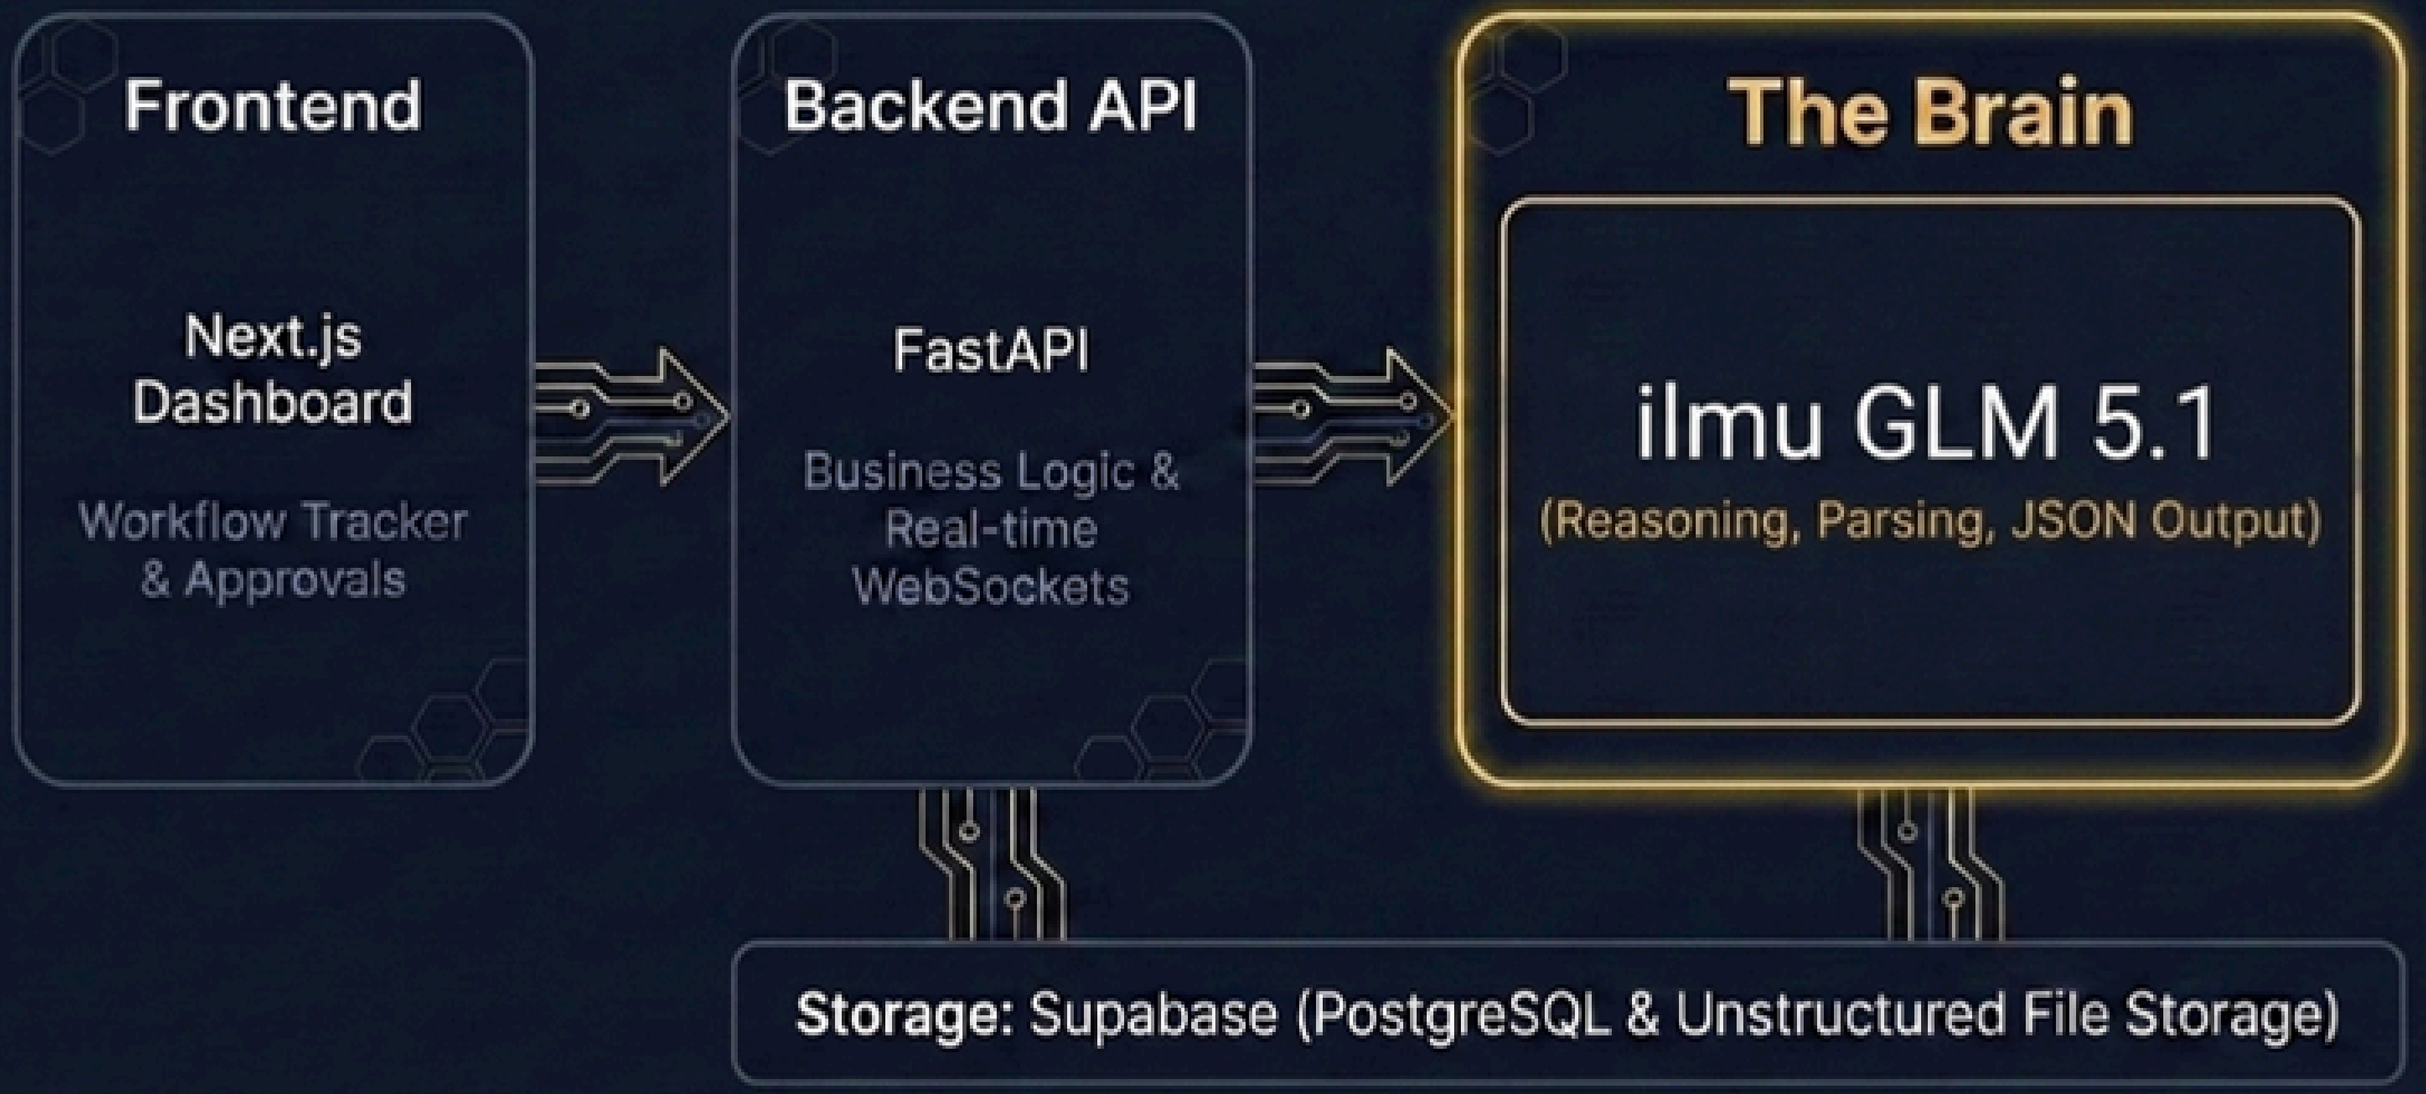
Negotiate
AI messages supplier automatically

Extract
AI parses messy supplier replies into data

Process Invoice
System extracts and validates terms

Finalize
User approves one-click transaction summary

Multi-step reasoning powered by ilmu GLM 5.1



Built for stateful workflows, not just conversation

	Manual Procurement	Standard Copilots	Bee2Bee
Architecture	None	Stateless Chat	**Stateful Workflow Engine**
Input Handling	Human Reading	Text Prompts	**Messy Real-World Data & PDFs**
Actionability	Human Execution	Suggests Action	**Executes Real Business Decisions**
Scope	Fragmented	Isolated Tasks	**End-to-End Automation**

This is not an AI feature — this is an AI system.

Transforming procurement into intelligent networks

From chaos to automation.
